AI, or Artificial Intelligence, refers to machines' ability to perform tasks that typically require human intelligence, such as learning, problem-solving, and decision-making.

Contemporary AI refers to the recent wave of user-friendly and interactive AI technologies. AI is becoming more accessible and easy to use.

AI as a collaborator
- ➢ Contemporary does not work well as a generator of ideas, but it can be GREAT to refine your ideas or get them rolling

DEI In AI
- ➢ AI "learns" from data. In order to have equitable AI, we must start with equity in the people who train and build them

AI Safety
- ➢ Never run with what an AI tells you, you should always have someone who generally understands its output

When to Use AI?
- ➢ The only way to know what AI is best at, is to use it. AI is a tool like any other and you should learn what this tool can and can't do. Then you'll know when to use AI
